

ENHANCED BIODEGRADATION

Americo has proven itself as a leader in “green” manufacturing and a true pioneer in Jan/San markets worldwide. 100% of the polyester fiber Americo uses in manufacturing floor pads, hand pads, and utility pads comes from recycled PET plastic, with a minimum 80% post consumer waste. Primary sources of these materials are recycled soda and water bottles.

35 Water Bottles (16.9 oz.)

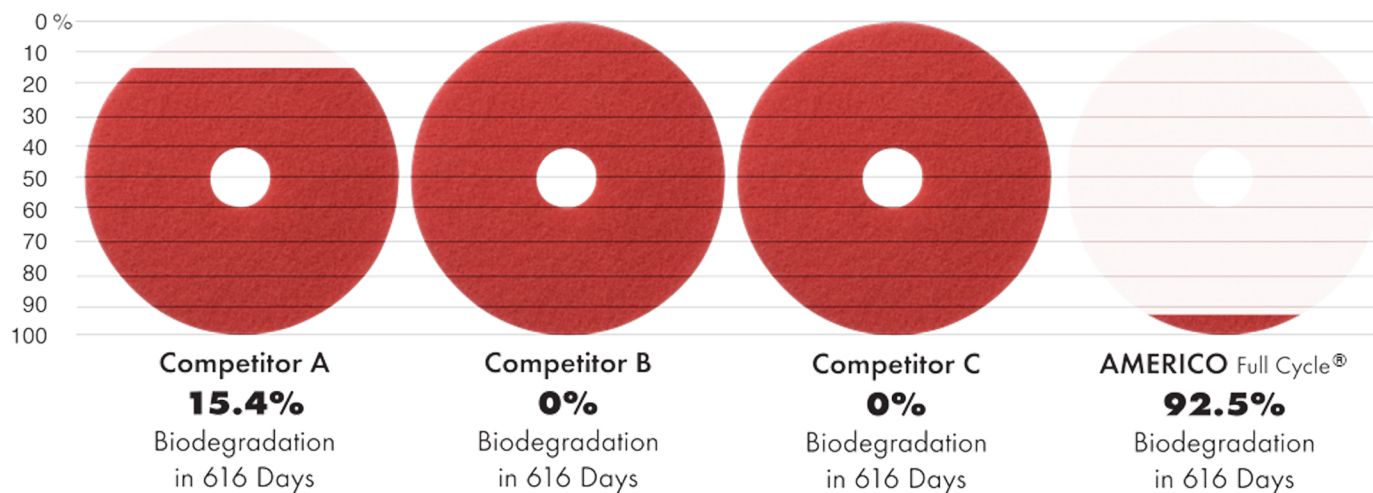

1 Cs. of 20" Floor Pads (5 pads)

Given the complexity and chemical composition of the materials used in manufacturing floor pads, recycling has not been considered a feasible option. As a result, millions of floor pads are discarded into landfills each year.

With an innovative technology, Americo is producing floor pads that have been specially formulated to biodegrade in a fraction of the time that it takes for conventional pads. So what does this mean for the end user and our environment? Consumers have access to high quality products with long lasting performance - while reducing mankind's impact on the environment.

ASTM D5511 testing shows Americo floor pads with Full Cycle® technology biodegraded 92.5% in 616 days, our nearest competitor's pad biodegraded only 15.4% in the same length of time.*

* For complete information on ASTM D5511 test results go to www.AmericoFullCycle.com.
